

AWN Firewall Audit Service

Ensure Perimeter Controls Adequately Protect Your Business-Critical Assets

When was the last time a security professional reviewed your network perimeter policies?

Get started in under two days!

- Assess your firewall rules, network zoning, and segmentation policies
- Recommend changes based on location of business-critical assets
- Validate logging to support optimal compliance reporting

Data breaches continue, even at companies with significant investments in perimeter security. This shows that firewalls and intrusion detection/prevention services can be bypassed by advanced persistent threats. If perimeter controls aren't configured properly to protect your business-critical web applications and data, you may be vulnerable to such attacks. That's why today's companies seek professional help to audit their firewall configurations on a regular basis so they can meet security and compliance needs.

The Firewall Audit advisory service from Arctic Wolf Networks (AWN) enables you to get an in-depth review of your perimeter security policies by AWN security engineers, who run the industry's leading SOC-as-a-service. We review your current firewall configurations, network zoning, and segmentation architecture, and recommend changes that ensure your business-critical assets are adequately protected from both internal and external cyberattacks.

Tailored Firewall Auditing

Every company faces unique cybersecurity challenges based on the perimeter controls and network segmentation it employs to protect its business-critical assets and IT infrastructure.

The Firewall Audit service leverages the best practices for perimeter controls and network segmentation that we've already implemented for leading customers across multiple industry verticals.

Firewall Audit Workflow

The AWN Concierge Security Engineer performs the following tasks:

1. Onboard

- Collects your existing firewall configurations and network infrastructure diagrams

2. Prepare

- Meets firewall team and reviews the current configuration, including:
 - Zones and segments; Object naming policy; Rules and traffic policies
- Reviews logging to provide optimal reporting and forensics capabilities

3. Monthly configuration backups

- Collects firewall configurations and stores them in our system
- Creates monthly firewall auto report
 - Assessment; Includes policy/configuration change report

4. Semi-annual strategic review

- Recommends changes to your perimeter security policies, including:
 - Zones and segments; Object-naming policies; Rules and traffic policies; Advanced features capabilities
- Validates that logging provides optimal reporting and forensics capabilities
- Reports on effectiveness of your perimeter security policies

AWN Advisory Services Ensure Your Assets Are Always Secure

Arctic Wolf Networks provides customized advisory services that leverage our expertise running the industry's leading cloud-based SOC-as-a-Service platform. The AWN CyberSOC™ continuously monitors the network infrastructure of hundreds of customers and enables them to rapidly detect and respond to security incidents with actionable intelligence. The unique value proposition of our Firewall Audit Service includes:

- **Security Expertise:** Our experienced Concierge Security Engineers hunt down and triage the most challenging security threats. We leverage firewall best practices for the top attack vectors we see across multiple customers.
- **Customized to Your Specific Needs:** Once we monitor your IT infrastructure, we gain comprehensive knowledge of your business risks and compliance requirements, and can customize firewall policies to meet your exact needs.
- **Ongoing Support:** Our offering provides ongoing monitoring and regular review, delivering not just point-in-time protection, but also continuous improvement of your security posture.
