

AWN Incident Response Simulation Service

Assess Your Readiness to Respond to Security Incidents

Are you ready to handle the next major cyberattack that threatens to bring your business to a grinding halt?

Get started in under two days!

- Further develop your IR plan with the help of security experts
- Safely assess your IR readiness with table-top exercises

Most companies are not immune to security incidents from ransomware attacks, phishing emails, and other cyberthreats. These attacks could result in your business grinding to a halt, or a costly, massive data breach. Determine how prepared your IT team is to detect and respond to incidents with a threat simulation exercise in a safe setting—before you are in the middle of a real cyberattack. It's similar to conducting a code-red drill or an earthquake preparedness exercise to assure that you can respond effectively in an emergency situation.

The Incident Response (IR) Simulation Service from Arctic Wolf Networks (AWN) enables you to assess your IR readiness with the guidance of our security experts who run the industry's leading SOC-as-a-Service. We review your current IR plan or develop one customized to your needs. We also run through live table-top exercises, and make recommendations on how to rapidly respond to a set of cyberthreats, while addressing regulatory requirements that apply to your industry.

IR Assessment Tailored to Your Needs

Every company faces unique cybersecurity challenges based on the security controls they have in place, and the security expertise of their in-house IT team to manage their IT infrastructure.

The AWN IR Simulation Service leverages battle-tested best practices used by AWN Concierge Security Engineers (CSEs) who have supported thousands of our SOC-as-a-Service end-users over the years. In addition, the AWN CSE customizes the IR simulation exercise to your IT environment, organizational structure, and compliance reporting requirements for your industry segment.

IR Simulation Workflow

The AWN Concierge Security Engineer performs the following tasks.

1. Onboard

- Reviews IT network infrastructure documentation
- Identifies list of customer contacts required for IR escalations.

2. Prepare

- Meets with stakeholders to schedule timing, and scope meeting
- Identifies security incidents for the IR simulations
- Sets up incident meeting plans with audio/video bridge

3. Run Simulation

- Runs through each simulated incident
- Documents performance of IR team
- If time permits, runs through simulations of other incidents

4. Recommendations

- Provides a report on effectiveness of IR processes
- Recommends revised IR plan and trains customer's IT team
- Highlights any compliance-related issues that might arise as a result of the IR testing conducted.

When you purchase more than one IR simulation per year, you are only charged once for the onboarding and preparation tasks.

AWN Advisory Services Ensure Your Assets Are Always Secure

Arctic Wolf Networks provides customized advisory services that leverage our experience running the industry's leading cloud-based SOC-as-a-Service platform. The AWN Cyber-SOC™ continuously monitors the network infrastructure of hundreds of customers and enables them to rapidly detect and respond to security incidents with actionable intelligence. The unique value proposition of our IR Simulation Services includes:

- **Security Expertise:** Our Concierge Security Engineers have experience hunting down and triaging the most challenging security threats. We leverage IR best practices for the top attack vectors we see across multiple customers.
- **Customized to Your Specific Needs:** Once we monitor your IT infrastructure, we gain comprehensive knowledge of your business risks and compliance requirements, and can customize IR plans to meet your exact needs.
- **Targeted to Your Organization:** We take a well-rounded approach while defining the IR plan, making recommendations on how your company's internal (e.g. IT, legal, marketing) and external stakeholders (e.g. auditors) should participate in the IR process.
