

AWN CyberSOC™ Monitoring for Box

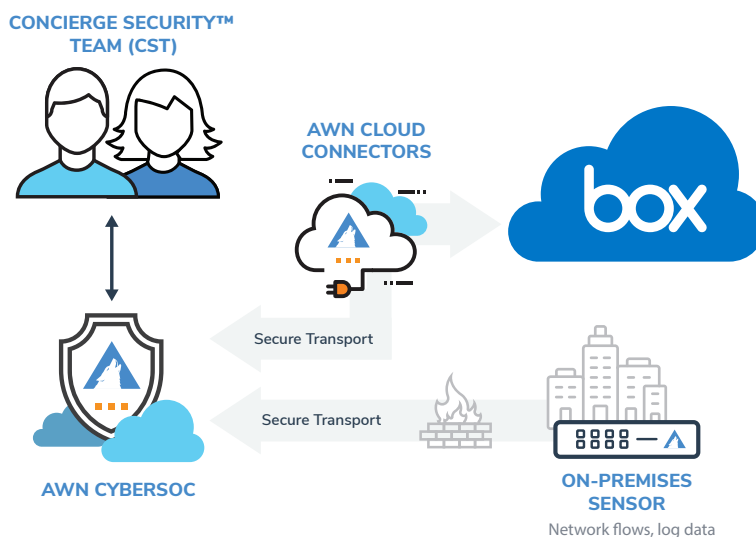

Arctic Wolf detects and responds to advanced threats targeting your Box deployment and helps you comply with regulatory mandates. Every customer is assigned a Concierge Security™ team (CST) of engineers, which provides the security expertise you need to comprehensively detect and respond to threats across your on-premises, hybrid, and cloud environments.

By monitoring your business's SaaS applications, Arctic Wolf detects threats like unauthorized access, human error, and malicious insiders.

Effective Monitoring of Your Box Deployment

The cloud-based AWN CyberSOC service detects malicious activity by providing comprehensive visibility into the use of your Box SaaS deployment and all on-premises infrastructure. AWN CyberSOC enables you to:

- **Centralize and simplify security business-wide:** Single pane of glass across multiple attack surfaces to centralize monitoring of network infrastructure and data in cloud (SaaS and IaaS), hybrid, and on-premises environments
- **Tap into Arctic Wolf security expertise 24x7:** Leverage the expertise of the Concierge Security team assigned to your account for effective, round-the-clock threat detection
- **Customize and scale security based on your exact needs:** Our service calculates how your business operates and the specific security needs of your IT infrastructure, applications, and users, delivering greater flexibility and tuning

Box Visibility and Alerting

AWN CyberSOC™ provides comprehensive monitoring for Box

- 100+ detection rules upon setup, plus additional customization with CST
- Supported Box editions
 - Starter
 - Business
 - Business Plus
 - Enterprise
 - Governance (add-on for Business Plus and higher)
- Detection and alerting for anomalous events
 - Login activity
 - Admin activity
 - File and folder activity
- Detailed reporting
 - Executive summary (overall view)
 - Usage reporting (login and admin activity)

AWN CyberSOC™ Monitoring for Box

Detect Unauthorized Access and Malicious Activity in Box

Detect suspicious login activity and admin behavior

- Multi-geo logins, brute-force attacks, activity from suspicious locations
- Anomalous admin settings changes
 - 2FA settings changes
 - Bulk user and group deletions
 - Escalation of admin privileges

Detect suspicious file and folder activity

- Collaboration policy violations
- Abnormal file downloads
- Legal hold policy changes
- Watermark removals

The Industry's Fiercest SOC-as-a-Service

A security operations center (SOC) is the most essential element of modern security. But a SOC is expensive to build, complicated to manage, and far beyond the reach of most small to midsize enterprises. So, many take the easy route and invest in new point security products, which is no guarantee of better protection. The cloud-based AWN CyberSOC™ service provides comprehensive 24x7 monitoring of both your on-premises network infrastructure and your cloud-native SaaS applications, such as Box. AWN CyberSOC differs from traditional managed security services, as it dynamically combines a world-class security team with advanced human-assisted machine learning and comprehensive, up-to-the-minute threat intelligence to protect you from known and emerging threats.
